

# Why network health is critical to healthcare organizations

Four key trends demonstrate the importance of internet reliability for healthcare organizations:

## 90%

of healthcare organizations are expected to migrate to the cloud by 2025\*

## 25%

of patients relied on **telehealth** in 2022 compared to 5% before the pandemic\*\*

## 94%

of healthcare IT pros who completed a cloud migration would recommend it.\*\*

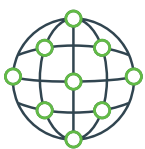

## 84%

of those who migrated reported that **HIPAA compliance is easier** to achieve in the cloud.\*\*

**Network health is critical to healthcare organizations** as they move key operations to the cloud. A slow or glitchy internet connection can stall critical applications and affect patient care.

**Network optimization** preserves the quality and resilience of internet connections, so cloud-enabled healthcare applications operate as intended.

**Bigleaf Networks** delivers flawless internet connectivity without compromising established security policies or regulatory compliance.

## Top healthcare technologies that rely on network health

- 1  Telehealth visits
- 2  Practice management
- 3  Electronic medical records
- 4  Patient communications
- 5  Research and diagnostics

When your healthcare operations depend on the internet, your internet connections can depend on Bigleaf.
